# WEEK 6 PROJECT ASSIGNMENT

**WHAT TO SUBMIT:**
- An executed "show tables" statement (including the results)
- An executed "describe <tablename>" statement (including results) for each/all of your tables.
- The script(s) that you use to import the data.
- Any script(s) you use to manipulate the data.
- The **single** SQL command that generates the following data.
- The actual results of the above-referenced SQL statement (all of it).

# HOW YOUR OUTPUT SHOULD LOOK – FIRST 50 ROWS

**NOTES:**
- You don't have to have the alternating color, that's just there to make it easy to view.
- Your column names might be different.
- The format can be slightly different, but the data, the sort order, and the order of the columns has to match.
- There should be many more rows than this.
